The Thermophysical Properties of Fluids Group performs experimental measurements and develops models and empirical correlations to describe and predict thermodynamic and transport properties for a variety of industrially relevant fluids and fluid mixtures including fuels, refrigerants, bulk chemicals and specialty chemicals.

Introduction ¶ Nearly all the fluids modeling in CoolProp are based on Helmholtz energy formulations. This is a convenient construction of the equation of state because all the thermodynamic properties of interest can be obtained directly from partial derivatives of the Helmholtz energy.

Properties. In general terms, supercritical fluids have properties between those of a gas and a liquid. In Table 1, the critical properties are shown for some substances that are commonly used as supercritical fluids.
